I would like to stress that I think the investment in time just to get these features built is commendable, and I applaud the developers and designers that worked hard on each feature. On the other hand, developing software is definitely not an easy task. It should be done in the best way possible and the company should invest sufficient resources to get this right and make improvements in a timely manner. It is extremely clear that the company does not have the manpower to work on all the features that Adobe Photoshop CC offers, but a few do truly make a big difference. With Adobe Photoshop CC, I hope that the company will continue to focus on usability, speed of operation and brilliant image editing. The releases so far have been great, but I believe that they've got a lot more still to come. For the number of things to do in Photoshop CC it is a little bit of a shame that some could not be optimized better. By this I mean that it should try to take some CPU-caches and put them into memory too. This one might be a little bit far fetched but such optimizations should probably be run with time-testing processes to decide if/when to make such changes. Considering that the software is alive for years and because the company invests a lot of time in new features, there should be more time for optimizations and fixing issues like this before too late. The overall impression is that Lightroom CC will not be able to replace Adobe Photoshop in the foreseeable future. This said, I find that the new approach to organizing basic tasks is very well-suited for UIs that are to be used with iOS devices. The quicker workflow makes design a lot more enjoyable. I have not used Lightroom much for more complicated workflows, simply due to the fact that I prefer to use Photoshop to achieve even finer results. Perhaps if that approach were to change, Lightroom might then have the potential to challenge Photoshop, and in that sense I would find it very attractive. I simply cannot imagine why one would not want to develop photos for future use in Lightroom. Since I am a bit of a Photoshop-neutralist, I would like more specific alternatives, though.
